Sample Questions and Their Answer Keys

Below are some sample questions from a typical sound and light webquest, along with their answer keys:

Question 1: What is the main difference between sound and light waves?

- **Answer:** Sound waves are mechanical waves that require a medium to travel through, such as air or water, whereas light waves are electromagnetic waves that can travel through a vacuum, like space.

Question 2: Explain how the reflection of light occurs and give an example.

- **Answer:** Reflection occurs when light waves bounce off a surface at an angle equal to the incident angle. An example is seeing your reflection in a mirror.

Question 3: Why does a straw appear bent when placed in a glass of water?

- **Answer:** This phenomenon is due to the refraction of light, where light changes direction as it passes from air into water because of the difference in density, causing the straw to appear bent.

Question 4: How do optical fibers use light to transmit data?

- **Answer:** Optical fibers transmit data using light signals that travel through the core by total internal reflection, allowing high-speed communication over long distances.

Question 5: Describe how sound waves can be used in medical imaging.

- **Answer:** Ultrasound uses high-frequency sound waves to create images of internal body structures, such as fetuses during pregnancy or organs, by detecting echoes of sound waves reflected from tissues.
