- Memorize formulas.
- Practice calculations regularly to improve speed and accuracy.
- Show all steps clearly for partial credit.

Review and Revise

- Leave time at the end to review answers.
- Correct any mistakes or incomplete responses.

Sample MBA Operations Management Exam Questions and Model Answers

Below are representative questions with detailed answers to illustrate the depth and approach needed.

Question 1: Explain the Economic Order Quantity (EOQ) model and its significance in inventory management.

Answer:

The Economic Order Quantity (EOQ) model is a fundamental inventory management tool used to determine the optimal order quantity that minimizes total inventory costs. These costs include ordering costs (costs associated with placing and receiving orders) and holding costs (costs related to storing unsold inventory).

The EOQ formula is given by:

$$EOQ = \sqrt{\frac{2DS}{H}}$$

Where:

- D = Annual demand
- S = Ordering cost per order
- H = Holding cost per unit per year

Significance:

- Cost Optimization: Helps organizations balance ordering and holding costs to reduce total inventory expenses.
- Efficiency: Aids in determining how much to order to prevent stockouts or excess stock.
- Simplifies Decision-Making: Provides a clear, quantitative basis for inventory replenishment.

Features:

- Assumes constant demand and lead time.
- Assumes no quantity discounts.
- Useful for products with stable demand.

Pros:

- Simplifies inventory planning.
- Reduces total costs if assumptions hold true.

Cons:

- Not suitable for products with variable demand.
- Ignores quantity discounts and other real-world complexities.

Question 2: Describe the differences between Just-In-Time (JIT) and Traditional Inventory Systems.

Answer:

Just-In-Time (JIT) and Traditional Inventory Systems represent two contrasting approaches to inventory management.

JIT System

- Principle: Minimize inventory levels by receiving goods only as needed for production or sales.
- Features:
 - Very low or zero inventory.
 - Emphasizes waste reduction.
 - Strong supplier relationships are critical.
 - Focuses on continuous improvement.

Traditional Inventory System

- Principle: Maintain buffer stock to ensure production continuity.
- Features:
 - Larger safety stock.
 - Based on forecasted demand.
 - Less reliance on real-time data.

Differences:

| Aspect | JIT | Traditional System |

|---|---|---|

| Inventory Levels | Very low | Higher buffer stock |

| Focus | Waste reduction, efficiency | Stock availability, risk mitigation |

| Demand Forecasting | Less reliance | Heavily dependent |

| Supplier Relationship | Close coordination | Less integrated |

| Flexibility | High | Moderate to low |

Pros and Cons

JIT Pros:

- Reduced inventory holding costs.
- Increased efficiency and quality.
- Less space required.

JIT Cons:

- Vulnerable to supply disruptions.
- Requires high supplier reliability.
- Not suitable for unpredictable demand.

Traditional System Pros:

- Buffer stock ensures stability.
- Easier to manage demand fluctuations.

Traditional System Cons:

- Higher costs due to excess inventory.
- Risk of obsolescence.

Case Study Based Questions and How to Approach Them

Case studies form a significant part of MBA operations exams, assessing analytical skills and application of theories.

Example Case: A manufacturing firm faces frequent delays due to poor inventory management. How should they implement a Lean Operations strategy to improve efficiency?

Approach:

- Analyze current challenges (delays, excess inventory, wastage).
- Identify relevant Lean principles (value stream mapping, waste elimination).
- Propose specific steps:
 - Streamlining processes.
 - Implementing Kanban systems.
 - Reducing setup times.
 - Training staff.
- Discuss expected benefits like reduced lead times and cost savings.

Sample Answer Summary:

Implementing Lean Operations involves mapping current processes to identify waste, adopting pull systems like Kanban to manage inventory levels, and fostering a culture of continuous improvement. This leads to more synchronized production, reduced delays, and lower inventory costs.
