Common Probability and Statistics Problems and Solutions

Below are typical problems encountered and how to approach them.

Problem 1: Calculating Probabilities

Example: What is the probability of drawing an ace from a standard deck of 52 cards?

Solution:

- Total outcomes: 52 cards.
- Favorable outcomes: 4 aces.
- Probability: $4/52 = 1/13 \approx 0.0769$ or 7.69%.

Problem 2: Estimating Population Mean

Example: A sample of 30 students has an average test score of 78 with a standard deviation of 10.

Estimate the population mean with a 95% confidence level.

Solution:

- Use the t-distribution (since σ is unknown and n is small).
- Confidence interval formula:

$$CI = \text{sample mean} \pm t(s/\sqrt{n})$$

- For 95% confidence and $df=29$, $t \approx 2.045$.
- Margin of error: $2.045 (10/\sqrt{30}) \approx 2.045 \cdot 1.825 \approx 3.733$.
- Confidence interval: $78 \pm 3.733 \approx (74.267, 81.733)$.

Problem 3: Hypothesis Testing

Example: Test whether a new drug reduces blood pressure. The average reduction in a sample is 8 mm Hg with a standard deviation of 5 mm Hg, based on 25 patients. Is there evidence at $\alpha=0.05$ level that the drug reduces blood pressure?

Solution:

- Null hypothesis (H_0): $\mu = 0$ (no reduction).
- Alternative hypothesis (H_1): $\mu > 0$.
- Test statistic:

$$t = (\text{sample mean} - \text{hypothesized mean}) / (s/\sqrt{n}) = 8 / (5/\sqrt{25}) = 8 / 1 = 8.$$

- Critical value t for $df=24$ at $\alpha=0.05$ (one-tailed): ≈ 1.711 .
- Since $8 > 1.711$, reject H_0 $\Rightarrow$ evidence supports that the drug reduces blood pressure.

Practical Tools and Software for Modern Solutions

Effective problem-solving often relies on software that can handle complex computations and simulations.

Popular Tools:

- R: Extensive packages for statistical analysis (e.g., ``stats``, ``bayes``, ``ggplot2``).

- SPSS, SAS, Stata: Commercial options with user-friendly interfaces.
- Jupyter Notebooks: Interactive environment for combining code, visualization, and narrative.

Embracing Data Visualization

Visual tools like histograms, boxplots, scatter plots, and heatmaps are invaluable for understanding data and communicating solutions effectively.

Challenges and Best Practices in Modern Probability and Statistics Solutions

Challenges:
