PDF.AddPage;

Page := PDF.Pages[0];

Text := Page.Canvas;

// Write content

Text.Font.Size := 14;

Text.TextOut(50, 50, 'Customer Report');

Text.Font.Size := 12;

Common FireMonkey Examples and Use Cases

Below, we explore typical FireMonkey examples that developers frequently utilize, explained in detail.

1. Creating a Basic Cross-Platform Application

Purpose: To introduce the foundational structure of a FireMonkey app, including form creation, component placement, and event handling.

Overview:

- Setting up a new project in Delphi or C++Builder.
- Designing a simple user interface with buttons, labels, and input fields.
- Implementing event handlers to respond to user interactions.
- Building for multiple platforms.

Key Components:

- TForm: The main window.
- TButton, TLabel, TEdit: Basic UI controls.
- TLayout: For organizing controls.

Sample Code Snippet (Delphi):

```
``delphi

procedure TForm1.Button1Click(Sender: TObject);

begin

Label1.Text := 'Hello, ' + Edit1.Text + '!';

end;

``
```

Insights:

This example demonstrates the core of FMX's event-driven paradigm. It's perfect for beginners to understand how UI components interact at runtime across different OSes.

2. Implementing Cross-Platform UI Layouts

Purpose: Showcasing how to design adaptable UIs that render well on various screen sizes and orientations.

Approach:

- Using TLayout and TGridPanelLayout to structure UI elements.
- Applying Responsive Design principles with anchors and alignments.
- Utilizing Platform Services to detect device type or orientation and adapt layouts dynamically.

Example Highlights:

- Creating a dashboard with panels that resize automatically.
- Adjusting font sizes or control visibility based on device type.

Sample Technique:

```
``delphi

procedure TForm1.FormResize(Sender: TObject);

begin

if Width > 800 then

Label1.Font.Size := 20

else

Label1.Font.Size := 14;

end;

``
```

Insights:

Cross-platform UI design is crucial for user experience. Examples like this help developers create

adaptable interfaces, reducing the need for platform-specific code.

3. Incorporating Animations and Transitions

Purpose: To add visual flair and enhance user engagement through animations.

Features Used:

- TFloatAnimation, TPositionAnimation, TColorAnimation.
- Creating smooth transitions for showing/hiding controls.
- Animating movement, opacity, color changes, or size transformations.

Example:

```
``delphi

procedure TForm1.ShowButtonClick(Sender: TObject);

begin

FloatAnimation1.Start;

end;

procedure TForm1.FloatAnimation1Finish(Sender: TObject);

begin

Label1.Text := 'Animation Complete!';

end;

...

```

Insights:

Animations make apps more dynamic and professional. FireMonkey's animation components simplify their integration, and examples serve as templates for more complex sequences.

4. Handling Multimedia Content

Purpose: Demonstrate playing audio, video, and displaying images within a FireMonkey app.

Sample Features:

- Using TMediaPlayer for audio/video playback.
- Displaying images with TImage.
- Handling media controls like pause, stop, seek.

Example:

```
``delphi

procedure TForm1.PlayButtonClick(Sender: TObject);

begin

MediaPlayer1.FileName := 'sample.mp4';

MediaPlayer1.Open;

MediaPlayer1.Play;

end;

``
```

Insights:

Media integration is vital for multimedia applications. Examples guide developers in managing media resources and controlling playback across platforms.

5. Data Binding and Database Connectivity

Purpose: Show how to connect UI components to data sources for dynamic data display and editing.

Features Demonstrated:

- Using LiveBindings to connect TGrid, TListBox, or TEdit controls to datasets.

- Connecting to local databases (SQLite, FireDAC).
- Performing CRUD operations.

Sample Outline:

- Setting up a TFDQuery connected to an SQLite database.
- Binding data to a TGrid component.
- Updating records directly from the UI.

Benefits:

Such examples illustrate how to build data-driven apps efficiently, critical for enterprise solutions.

6. Developing Custom Components and Controls

Purpose: To extend FireMonkey functionality by creating reusable custom controls.

Example Features:

- Building a custom button with unique styles.
- Creating a composite control combining multiple components.
- Handling custom painting via PaintBox.

Sample Approach:

```
```delphi
```

```
procedure TMyCustomButton.Paint;
```

```
begin
```

```
Canvas.Fill.Kind := TBrushKind.Solid;
```

```
Canvas.Fill.Color := TAlphaColorRec.CornflowerBlue;
```

```
Canvas.FillRect(ClipRect, 0, 0, AllCorners, 1);
```

```
Canvas.DrawString('Custom Button', PointF(10, 10), False);
```

end;

```

Insights:

Custom controls bolster branding and UX. Examples serve as foundational templates for more complex widgets.
