Sample Questions and Suggested Answers

Below are some typical questions from the Madhyamik suggestion for Physical Science 2015, along with brief guidance on how to approach them.

Question 1: Define Newton's Second Law of Motion. State its mathematical form.

Approach:

- Begin with a clear definition emphasizing the relation between force, mass, and acceleration.
- Write the formula: $F = m \times a$
- Provide a practical example for clarity.

Sample Answer:

Newton's Second Law of Motion states that the force acting on an object is directly proportional to the acceleration produced in it and inversely proportional to its mass. Mathematically, it is expressed as:

$$F = m \times a$$

where,

- F is the force applied (in Newtons),
- m is the mass of the object (in kilograms),
- a is the acceleration produced (in meters per second squared).

This law explains how the velocity of an object changes when subjected to an external force.

Question 2: Explain the phenomenon of refraction of light with an example.

Approach:

- Define refraction.
- Describe how light bends when passing from one medium to another.
- Provide an everyday example, such as a straw in water appearing bent.

Sample Answer:

Refraction of light is the bending of light rays when they pass from one transparent medium to another with a different optical density. This bending occurs because the speed of light changes in different media.

Example: When a straw is placed in a glass of water, it appears bent at the surface of the water. This is because light rays from the submerged part of the straw bend as they pass from water (denser medium) to air (rarer medium), making the submerged part look displaced.
