Detailed Examination of Key Properties

Physical Properties

Density and Specific Gravity

Density influences fuel handling, storage, and engine performance. The handbook specifies typical density ranges for aviation fuels like Jet A and Jet A-1 at standard temperature (15°C). For example:

- Jet A: approximately 0.804 to 0.808 g/cm³
- Jet A-1: approximately 0.804 to 0.808 g/cm³

Variations are influenced by crude oil source, refining processes, and additive packages. Precise measurement ensures correct fuel volume calculations, essential for aircraft loading and range estimations.

Viscosity

Viscosity affects fuel atomization and combustion efficiency. The handbook details acceptable

viscosity ranges at specific temperatures, emphasizing the importance of temperature-dependent testing due to the significant impact on flow characteristics.

- Typical viscosity at 40°C: 1.2 to 2.0 cSt for Jet A-1
